The Impact Center at UNC's Frank Porter Graham Child Development Institute is offering two adult learning sessions designed for behavioral health providers serving Children with Complex Needs. Participants will learn about foundational concepts of implementation science and how effective implementation practices support people, agencies, and systems who serve North Carolina's children and families. In addition, opportunities for interactive discussion and applied learning will be offered to explore how implementation best practices can be applied in day-to-day work and roles for improved outcomes.

Learning Objectives:

1. Learners will be able to give a basic explanation of concepts, such as "implementation" and "readiness."
2. Learners will be able to describe one way that focusing on agency capacity areas can positively impact their work with CWCN.
3. Learners will name the capacity areas that help bring evidence-supported practices into clinical settings, and what it takes to fully support their use to achieve clinical outcomes.
4. Learners will understand how their daily work with children plays a part in NC's support structure for CWCN.

NC DEPARTMENT OF
**HEALTH AND
HUMAN SERVICES**
Division of Child and Family Well-Being

This training is funded by the NC Department of Health and Human Services, Division of Child and Family Wellbeing, as a project of the Children with Complex Needs statewide administration.
